Technology and change, led together.

An Australian AI, software engineering and organisational transformation consultancy.

We work with business owners, internal teams and technology partners to set priorities, deliver technology and prepare people for new systems and processes.

Strategy & transformation

Set business priorities, review processes and define an operating model and implementation roadmap.

AI & automation

Assess opportunities, evaluate a pilot and build workflows around available information and existing systems.

Software engineering

Design and develop websites, business applications and connected software around the people who use them.

Delivery & change

Coordinate project delivery, prepare teams for rollout and establish acceptance, support and handover responsibilities.

Perth, Western Australia

Selected client work.

Website and software projects delivered through TR.

RM Safe

A public website and operational software for a workplace safety consultancy. The work includes document access and interfaces for inspection forms and company records.

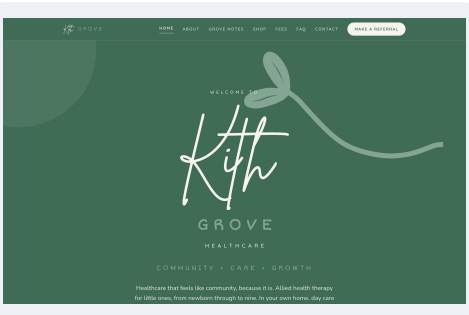

Explore the project

Nana Bread

A dedicated storefront for a Perth bakery whose orders had outgrown direct messages. The website presents products and provides ordering, wholesale and catering routes.

Explore the project

Kith Grove Healthcare

A paediatric practice website bringing together service information, referrals, fees and common questions for families.

Explore the project

The people behind TR.

Tom

Co-founder

Strategy, product & design

Shapes the project brief and the experience people will use, working across business priorities, product decisions and interface design.

Andy

Co-founder

Technology & engineering

Leads the technical development of websites and applications, including the connections between interfaces, data and services.

Professional background

Our team brings experience in project delivery and organisational change gained through professional roles within other organisations. At TR, we combine that background with product design and software engineering.

Working with us

Focused review	Assess an opportunity or a project already underway, then define the next decision.
Scoped delivery	Agree the work, deliverables and acceptance criteria for a defined project.
Alongside your team	Add delivery, change or technical capability alongside internal teams and suppliers.

Discuss your project.
